Information about Climbs

For any climb to be rated (receive a climb score/category) it must be at least **500 meters** in length with an average grade of **3% or more**.

All climb scores are based on distance, grade/elevation change, and maximum elevation. The combination of these factors drives all final climb categories and there is no subjective analysis used in the final scoring of any climb score. All

other climbs that do not meet the criteria for HC to Cat 5 are simply too small to rate and can usually be crossed easily by bicycle, running, or walking. The original concepts for the MapMyFitness categorization of all climbs came from the categorized climb ratings given by the UCI for races like the Tour de France and other professional cycling events. Our methodology is unique in several ways to allow for categorizations to be relevant for all sports and we added an additional difficulty with category 5 climbs. If you have any questions please feel free to email support@mapmyfitness.com.
